

CubeLock

Innovative, easy to build, compact and flexible aluminium display system

Parkes
display&expo

CubeLock | robust, adaptable and very easy to build

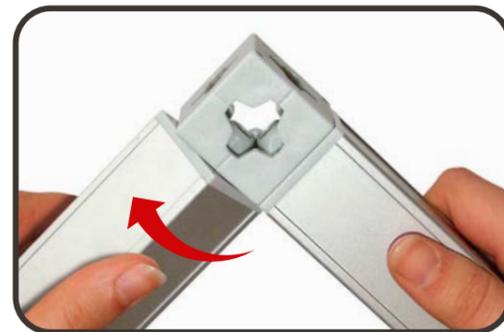

The **CubeLock** is a reconfigurable stand building system that assembles with a simple tool free 'twist 2 Lock' action. The visual impact of the **CubeLock** system is that of a custom build stand appearance. It is a robust design to hang large screens, shelving units, storage areas and arches, yet is also highly portable.

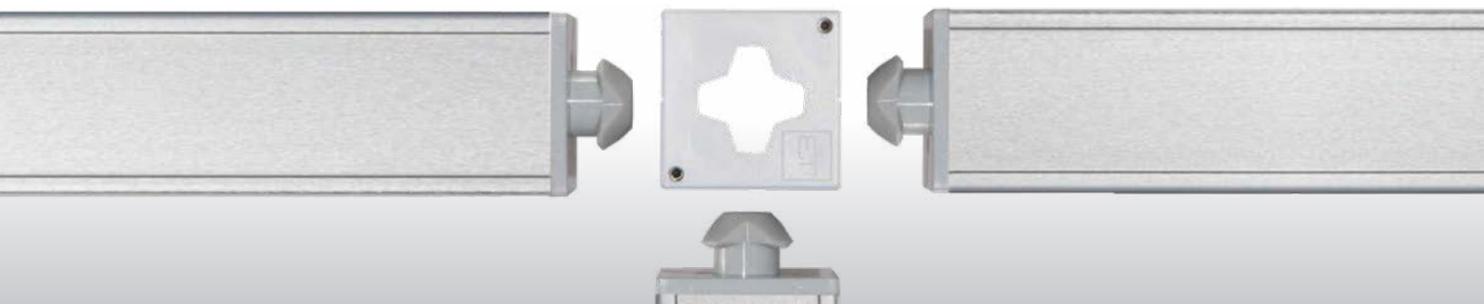

"Parkes worked seamlessly with J M Posner to achieve this stand with a very tight budget and timeline and delivered everything on time despite extreme weather and snow to contend with."

CubeLock features

- ✔ Can be used with screens, shelving and product displays
- ✔ Durable aluminium reconfigurable structure
- ✔ Easy to assemble - No tools required
- ✔ Renewable fabric, foamex or rollable graphics
- ✔ Available to loan or buy

Twist2Lock, it's that simple...

The key components consist of an aluminium beam and a connector which join together with a brilliantly simple, **Twist2Lock**' action.

CubeLock | is a seamless system and is able to carry all types of media including rigid or roll-able panels, tension fabrics and textiles. 60" screens, shelving, display cabinets and projector screens can all be easily incorporated.

The key components consist of an aluminium beam and a connector which join together with a brilliantly simple, 'Twist2Lock' action.

CubeLock | open shelving system

Another useful feature of the **CubeLock** range is an adjustable open shelving system providing endless display opportunities.

Adjustable Shelf Clip

Save time and money by creating shelving schemes without needing additional cross tubes and connectors to support the shelves.

Channel Shelf Support

Where shelf height adjustment is required we recommend our Adjustable Support. The support simply locates into any channel profile beam in the same way as our corner braces; secured by tightening a finger wheel which locks a metal plate into the beam - No tools required.

Shelves can be horizontal or sloping at 30° or 45°

Fixed Support Shelf

We recommend the Fixed Support shelving system when the position of the shelves can be predetermined.

The support slides into the tube profile and is supported from below by our decorative trim insert which is cut to length according to the position of the shelf. A second piece of trim slides in above the support to create a seamless look. The number of shelves is only limited by the spacing you require.

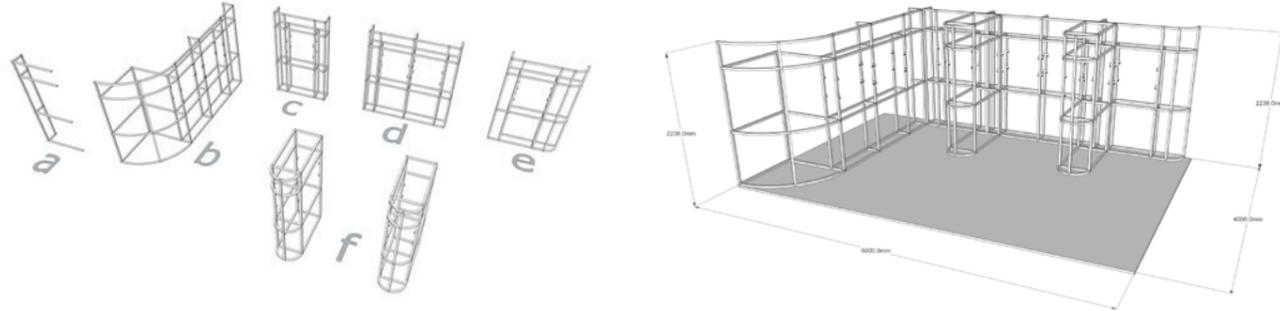

CubeLock creates a great freestanding display in shopping centres

Case Study

Decorative Packaging Manufacturer

Brief:

"We exhibit at 4 or 5 shows each year, the stand size can vary from 3m x 5m up to 7m x 5m, so we need a system that can be adapted to suit each show. We require our products to be well lit and to have plenty of display area."

Stand was designed in individual sections so that bays could be used as island displays or as part of the back wall depending on floor space. Sections can be included / omitted depending on the floor space available.

Pre build in workshop ready for shelves to be added

Solution:

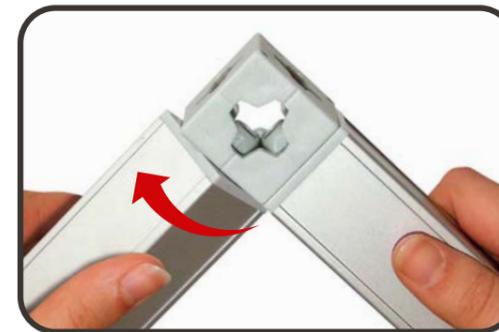

The stand drew a lot of attention and our products were illuminated beautifully by the LED lights.

Everything arrived in tip top condition and we were extremely pleased with the result. Stand in use at the Packaging & Innovation Show

"I wanted to say thank you so much for all your help with our Stand. You have been very patient with us, flexible, co-operative and prompt in all your response. The Stand looks fantastic - we are receiving lots of great feedback and the team are very proud to be displaying it. Please pass on my sincere thanks to all the team who worked on the Stand - fabulous job!"

The CubeLock creates a stunning lightbox wall

CubeLock | compact, lightweight & easy to build

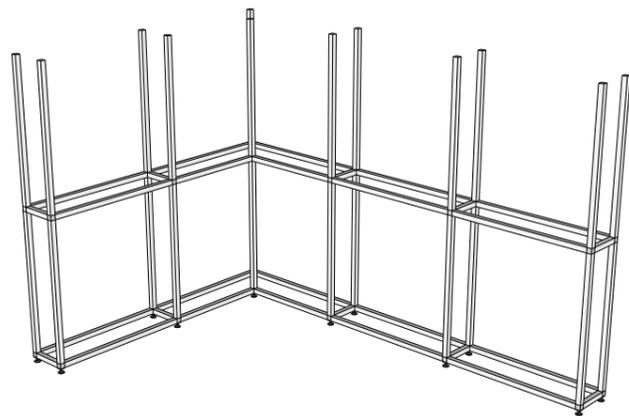

The **CubeLock** range has been designed to be adaptable to a wide variety of display environments; exhibition stands, point of sale, conference sets, portable bars, counters, light boxes, photobooths and hanging banners; the possibilities are endless.

#2

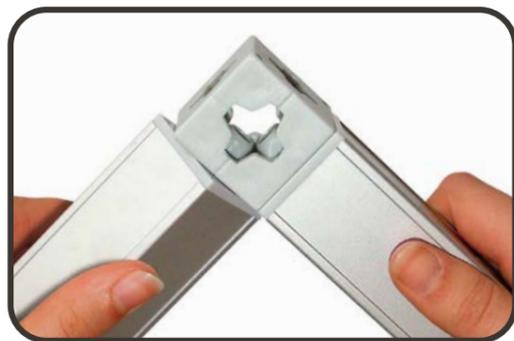

Once the foot print is levelled **Twist2Lock** the first set of vertical uprights to the footprint. Then **Twist2Lock** the next set of connectors to the ends of the vertical beams.

Twist2Lock the horizontal beams into position. Double check the framework is level.

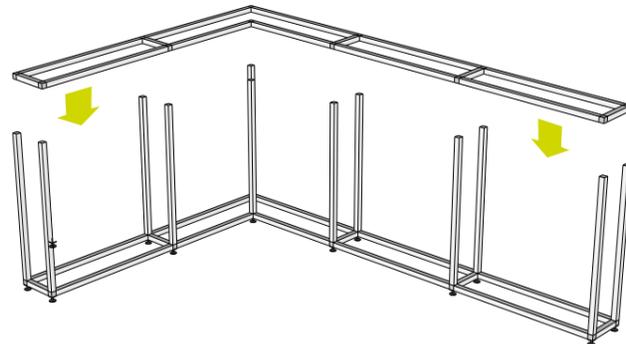

#4

Twist2Lock the horizontal beams into position. This basic process can be repeated depending on the height of the structure.

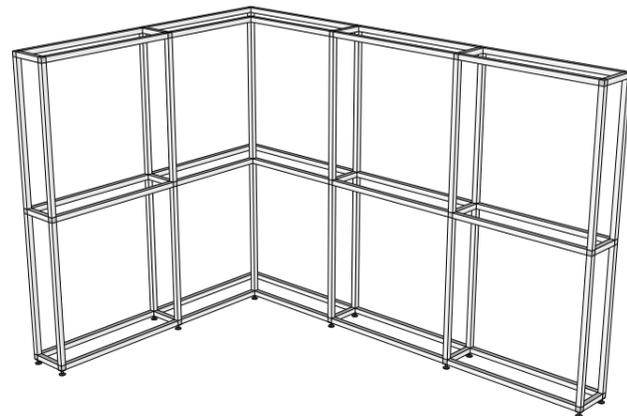

#1

Insert feet into frame and start building the footprint of the stand or structure. Once you have positioned the footprint ensure the framework is level - The height can be adjusted using the feet.

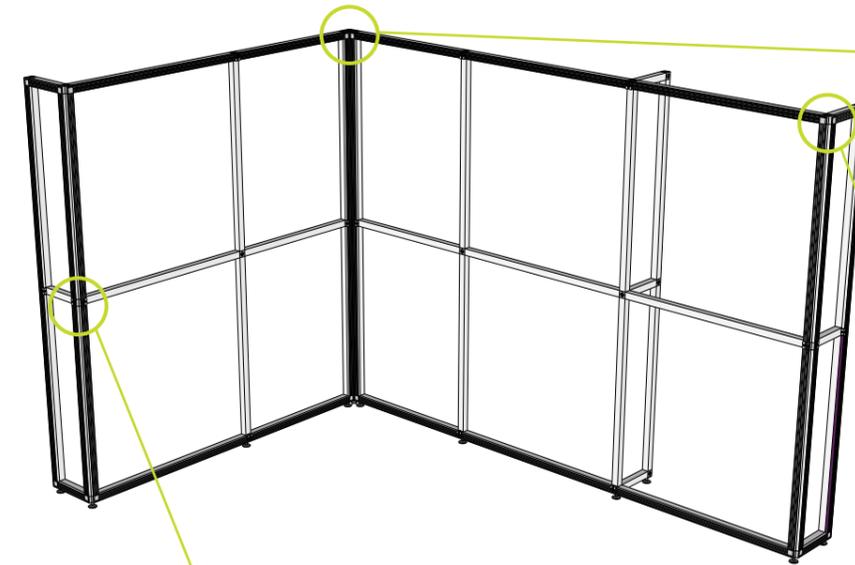

#3

Twist2Lock the second set of vertical uprights. Then twist & lock the next set of connectors to the ends of the vertical beams.

Double Joiner Detail

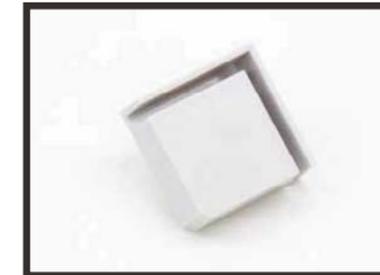

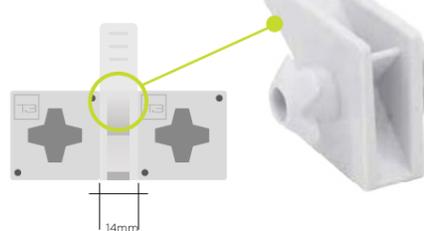

T Insert Detail

Inserts

Once the structure has been built you will need to fit the relevant fabric inserts to the connectors faces. L shape inserts are for corners and T shaped inserts are for straight runs.

Double Joiner

Fabric Inserts

Once you have built the **CubeLock** structure you will need to fit the relevant inserts before fitting the fabric.

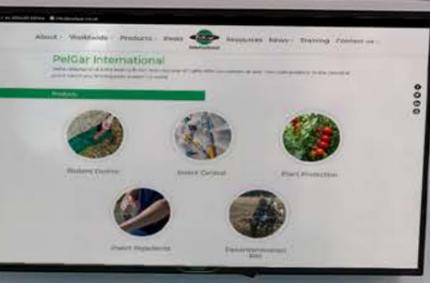

Applying Fabric

Applying fabric couldn't be easier, simply start in the top left hand corner and feed the PVC edging into the channel. Once the fabric has been fitted to the top and sides you will need to fit the bottom, this might be slightly more challenging as the last edge is what puts the tension through the fabric for a seamless finish.
